

## System Components Management Tools

### Encoder:

SALTO encoder is a compact device, which reads, encodes and update cards. Available in different versions depending on the PC connection (serial port ethernet).

#### Technical data:

- 12 v DC/ 500mA 6VA adaptor included.
- Connection to the PC: Serial RS232, Ethernet/Wifi, or USB.

### Desktop reader:

- Created for the Hotel environment, the SALTO desktop reader is designed to read some data from the R&W carriers and send to an external device, usually a Point of Sale terminal.
- This can be useful in a PMS environment and works with industry standard protocol.

#### Main features:

- Configuration of dip switches control the data to be read and the type of interfaces with the external device.
- The interface with the external device can be RS232, OMRON and WIEGAND.

#### Technical data:

- 12 v DC/ 500mA 6VA adaptor included.
- Power supply: 12v DC source (included).
- Connection to the external device: 9 pin D-type female connector (to be connected to serial port).
- Data read by the WRADAPT: ROM CODE, TRACKS ON KEY, WIEGAND CODE.
