

Davian Systems Ltd

When working environments call for tougher storage solutions the Heavy Duty provides extra security, without compromising on smart appearance.

The Heavy Duty Solution

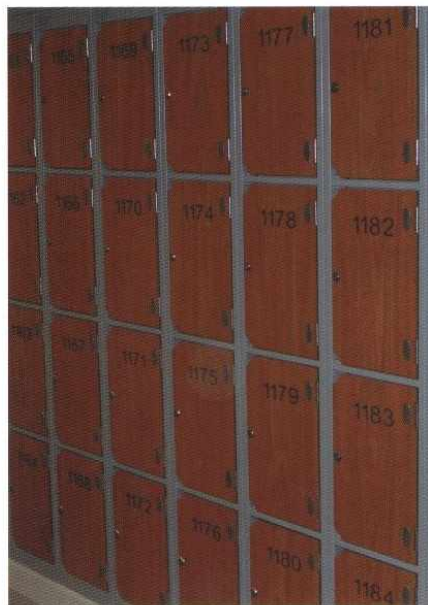

The solid grade laminate outer face of the Heavy Duty provides a tough locker door, resistant to casual vandalism.

The robust 10mm thick doors are plant on, covering the complete locker frame, providing a clear-cut finish.

Secured by a heavy duty hinge they remain strong, even under persistent mistreatment.

The Extra Heavy Duty Solution

The extra heavy duty advances on the original heavy duty door by combining tough inset doors with double locking components.

The advanced locking design provides a return lip within the internal door frame for the hooked cam to lock behind. As well as this a locking slot in the door frame upright enables secure locking in two places.
